## Parent/INStructor Page: PLastic Egg/ChicKen PLuMage GeneticS Game

NOTE: The material has been oversimplified! Purpose is to explain Punnett Squares. For more on chicken genetics, go to: https://scratchcradle.wordpress.com/genetics-mini-series/
Activity adapted from: http://www.cosee-west.org/AprilLectureMaterials/Activities/PlasticEggGenetics.pdf This activity and blog: www.desertwind.us

## Materials:

1. 2 sets of 6 different colors plastic eggs (per 12 eggs). Suggested colors are given below.
2. Student Key to put inside eggs: Corresponding colors of candy, buttons, centimeter cubes, or any colored manipulative that will fit, or a slip of sturdy paper with the 4 offspring color marked. If you use candy, you will have to restock each egg, if you use manipulatives or a paper key, you can use it from class to class and year to year.
3. Worksheet copy for each child. If child is pre-reading, color in the phenotype boxes.

## Instructor Preparation:

1. Introduce age-appropriate concepts of recessive/dominant traits, genotypes/phenotypes, and Punnett squares.
2. The egg shells represent the plumage color contributed by the parents - half the egg represents the Sire (father/rooster), half the egg represents the Dam (mother/hen). Use the genotype/phenotype chart to match plumage color to phenotype.

Simplified Sire/Dam and Offspring Chicken Plumage Genetics:

| Genotype <br> BB | Phenotype <br> Black Feathers | Use: <br> $1 / 2$ black egg | Genotype <br> RR | Phenotype <br> Red Feathers | Use: <br> Bb |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  | Blue Feathers | $1 / 2$ blue egg egg |  |  |  |

3. Inside each egg, place the 4 corresponding colored pieces to show offspring. You can use candy, small manipulatives, or include an answer key (color dots on sturdy paper). Set them up as follows:

| Sire/Dam | Genotype | Offspring | Sire/Dam | Genotype | Offspring |
| :---: | :---: | :---: | :---: | :---: | :---: |
| black x black | $B B \times B B$ | 4 black | red x red | $R \mathrm{R} \times \mathrm{RR}$ | 4 red |
| black x brown | $\mathrm{BB} \times \mathrm{bb}$ | 4 blue | red $x$ yellow | $\mathrm{RR} \times \mathrm{rr}$ | 4 orange |
| brown x brown | $\mathrm{bb} \times \mathrm{bb}$ | 4 brown | yellow x yellow | rr x rr | 4 yellow |
| blue x blue | $B b \times B b$ | 1black <br> 2blue <br> 1 brownn | orange x orange | $\mathrm{Rr} \times \mathrm{Rr}$ | 1 red <br> 2 orange <br> 1 yellow |
| blue $\times$ black | $B b \times B B$ | 2 blue <br> 2black | orange x red | $\mathrm{Rr} \times \mathrm{RR}$ | 2 red <br> 2 orange |
| blue $x$ brown | $\mathrm{Bb} \times \mathrm{bb}$ | 2 blue 2 brown | orange x yellow | $\mathrm{Rr} \times \mathrm{rr}$ | 2 orange 2 yellow |

4. Complete 1-2 (or more, if necessary) Punnett Squares with the children, then let them do the rest alone or in groups. When they finish, let them open the eggs and check their answers!

This activity can be used to reinforce percentages, as well (ex: 25\% of the chicks will have red feathers, $50 \%$ will have orange feathers, and $25 \%$ will have yellow feathers).

## Plastic Egg/ChicKen PluMage GeneticS GaMe

| Phenotype | Genotype |
| :--- | :--- |
| Black Feathers | BB |
| Blue Feathers | Bb |
| Brown (khaki) <br> Feathers | bb |

| Phenotype | Genotype |
| :--- | :--- |
| Red Feathers | RR |
| Orange Feathers | Rr |
| Yellow Feathers | rr |

## Directions:

1. Choose one egg, but do not open it yet.
2. One half of the egg represents the plumage (feather) color of the dam (mother/hen). The other half of the egg represents the plumage (feather) color of the sire (father/rooster).
3. Record the plumage color phenotype and genotype of your egg in the chart.
4. Place the genotype of your egg into the Punnett Square.
5. Determine the possible genotypes and phenotypes of the offspring.
6. When you are finished - open your egg! Do your answers match?
a. If yes, put the egg back together, and choose another.
b. If no, check your work, and make corrections

Example of how to fill in Punnett Squares:
SIRE:

2 chicks have brown feathers
